

Amendments to the Claims

- 1 (original): A low application temperature hot melt adhesive that is applied at or below 300°F and wherein the bonded adhesive heat stress value and the adhesive application temperature are separated by 110°F or less.
- 2 (original): The adhesive of claim 1 applied at or below 250°F and wherein the bonded adhesive heat stress value and the adhesive application temperature are separated by 100°F or less.
- 3 (original): The adhesive of claim 2 applied at or below 200°F and wherein the bonded adhesive heat stress value and the adhesive application temperature are separated by 100°F or less.
- 4 (previously amended): The adhesive of claim 1 wherein crystallization of the adhesive when analyzed by differential scanning calorimeter from application temperature to room temperature at a cooling rate of 150°C/min yields a time between initial cooling and crystallization of 0.35 minutes or greater.
- 5 (original): The adhesive of claim 1 that is thermally stable at application temperature for a period of one hundred hours as indicated by a viscosity change within plus/minus ten percent of the original application viscosity.
- 6 (original): The adhesive of claim 1 further comprising an energy absorbing ingredient.

7 (original): The adhesive of claim 1 further comprising a fragrance.

8 (original): An article of manufacture comprising the adhesive of claim 1.

9 (canceled)

10 (original): The article of claim 8 which is a carton, case, tray, bag or book.

11 (canceled)

12 (original): A packaged article contained within a carton, case, tray or bag, wherein the carton, case, tray or bag comprises the adhesive of claim 1.

13 (original): The packaged article of claim 12 which is a packaged food article.

14-21 (canceled)

22 (new): The adhesive of claim 3 wherein the bonded adhesive heat stress value and the adhesive application temperature are separated by 90°F or less.

23 (new): The adhesive of claim 1 which has an application viscosity of less than 2000 cps.

24 (new): The adhesive of claim 22 which has an application viscosity of between about 800cps and 1500 cps.

25 (new): The adhesive of claim 1 comprising an ethylene n-butyl acrylate copolymer.

26 (new): A low application temperature hot melt adhesive that is applied at or below 250°F, in which the bonded adhesive heat stress value and the adhesive application temperature are separated by 100°F or less, in which crystallization of the adhesive when analyzed by differential scanning calorimeter from application temperature to room temperature at a cooling rate of 150°C/min yields a time between initial cooling and crystallization of 0.35 minutes or greater, and is thermally stable at the application temperature for a period of one hundred hours as indicated by a viscosity change within plus/minus ten percent of the original application viscosity.
